Year 12 Lancaster University Biomedical and Life Science Department visit

Dear Parents and Guardians,

The biology department is linking with Dr Emma Shawcross, a teaching fellow in the Biomedical and Life Science department at Lancaster University. Dr Shawcross has worked closely with LRGS biology to plan a variety of educational activities to complement the content taught in the AQA A-level Biology specification. The activities will take place in the Health Innovation Centre (HIC) on the university campus.

This is an exciting opportunity. The students will be working with biomedical undergraduates and have access to the facilities at this highly ranked university. The activities aim to inspire LRGS A-level biology students in the fields of human physiology, biotechnology, genetics and immunology.

LRGS biology teachers will accompany two groups of students, **one group 9am-3pm on Thursday 14th December and one group 9am-3pm on Friday 15th December.** There is no cost to the students, but we ask that they make their own way to and from the university. Students can bring a packed lunch to eat at the HIC or they can visit the food outlets on campus during the lunch break without teacher supervision.

Students can sign-up for the visit on Wisepay.

Evolve should send out an email link (please check junk mail) to be able to consent for this trip.

Yours sincerely,

Mrs. K. Newton

Biology teacher
